

BRIX INDEX FOOD QUALITY CHART

One of the simplest quality tests we use to determine if the food you grow or buy is of any real nutritional value and flavor is the Brix Index Test. Total crude mineral sugars are measured using a Brix refractometer. The late Dr. Carey Reams developed this qualitative and quantitative research to measure crop production characteristics. Dr. Reams had a team of 34 Agricultural Engineers under his employment. Today, several million acres are growing using the Reams Methodologies with much success.

The higher the available soil phosphate level the higher the crude mineral sugars, the higher the crude mineral sugars the greater the specific gravity or density, the greater the density the better the nutritional quality, flavor and refrigerator storage capacity.

Refractive index of crop juices, measured in % sucrose or °BRIX
